

Dado LCD Touch Screens

Dado Automation offers two styles of LCD Touch Screens. The LCD Touch Screens are offered as an option, they are not required. Note: A system can be operated from various means of external control.

The **LCD Touch Screen** is available in a **Standard** and **Fingerprint Keypad** version. They are currently offered with black and white faceplate color options.

Standard: This version allows for basic door control(toggle from one side to the other), incremental positioning(move the door to any position between open and close). There is a lock feature also with an indication on both inside and outside Touch Screen to show the lock status. The display screen has two graphic modes: Standard Door Control Mode and Numeric Keypad Mode.

Fingerprint Version: The Fingerprint version includes a biometric fingerprint sensor that can store up to 990 fingerprints. The display screen has two modes: Standard Door Control Mode and Numeric Keypad Mode.

The Standard Touch Screen includes an Infrared "Hand Wave" sensor. The small slots at the top of the plastic faceplate contain an infrared sensor that will detect a hand being waved within 4" of the sensor. This allows for hand free operation.
